NARRATIVE

The purpose of this survey is to document the new right of way lines of U. S. Highway 40, in Roosevelt, that were created by the following UDOT Projects numbered S-0040(136)112 and F-R399(195) by the acquisition of the Utah Department of Transportation of five parcels of land. Survey control and mapping for this project was developed by ESI Engineering, a survey control sheet has been prepared for each project and is on file at UDOT. ESI Engineering recovered the Uintah County Section Corner monuments shown here on and reflect the actual "ground" distance between the monuments. Original vesting documents, UDOT right of way plans and observation of existing roadway improvements were used to fix the location of the existing right of way lines of U.S. Highway 40, through this part of Roosevelt. Some of the parcels acquired were parts of lots in subdivisions, UDOT does not generally require these parcels to be tied to section corners as long as they tie to a lot corner of record. For the purpose of defining the newly established right of way I have provided three overall descriptions for the right of way acquired on U.S. 40 for these two projects, the descriptions are provided with UDOT Highway Bearings. All station and offsets shown on this plat are from the UDOT Project F-R399(195) control line unless otherwise noted. The basis of bearing for this survey is the south line of the Southeast Quarter of Section 30, T.2 S., R.1 W., U.S.B. & M. as shown on this plat.

Please note that the bearings of the UDOT parcel that have been acquired have a rotation as noted after each to equal the bearings of the datum upon which this survey is based (UDOT Highway Bearings). All bearings and distances shown on the plat are measured UDOT Highway Bearings unless noted otherwise.
